Yunefy Order Management Solutions

Simplify Order Management

For efficient supply chain operations

The Order Chaos Problem

Disconnected Channels = Costly Errors
Managing orders across multiple marketplaces, storefronts, and systems often results in:
- Duplicate or missing orders
- Manual processing delays
- Overcommitted inventory
- Frustrated customers

Yunefy brings all orders into one system and automates fulfillment from start to finish.

Centralized Order Dashboard

A Unified Overview

The **Centralized Order Dashboard** provides a seamless way to monitor all operations in one place, eliminating the need to switch between disconnected systems. This promotes efficiency and clarity for your team.

Key Features

All Your Orders. One Unified View.
 Yunefy syncs orders from every channel—Amazon, Shopify, eBay, your website—into one dashboard. Search, filter, and act on any order in seconds.

Enhanced Collaboration

By integrating various channels into a single view, teams can **collaborate effectively**, share information, and respond to customer needs swiftly. This leads to higher satisfaction rates and streamlined operations.

Order Routing & Assignment

Smart Order Flow

Utilizing **intelligent routing**, our system optimizes each order's path, ensuring that items are directed to the nearest and most efficient warehouse. This **streamlines operations** and enhances delivery speed.

Enhanced Efficiency

By automating the assignment process, staff can focus on managing exceptions and customer needs. This **reduces manual errors** and accelerates workflow, yielding significant improvements in fulfillment times.

Real-Time Adaptability

Adapt in real time by using customizable rules to route, split, tag, and reprioritize orders.

Updates &Payment Status Tracking

Real-Time Updates

Keeping track of orders is essential. With **real-time updates**, you can stay informed about every stage of the order process, ensuring you're always one step ahead of potential issues.

Payment processing integration

The system captures payments and updates payment status within the OMS.

Inventory reservation on orders

Reserves stock quantity for pending orders to prevent overselling

Split, Merge, Hold Orders

Flexible Order Management

The ability to **split and merge orders** allows businesses to adapt to changing customer needs, ensuring that every request is fulfilled efficiently and accurately.

Easy Order Adjustments

Customers can easily **hold orders** and release when inventory becomes available or combine multiple items into one delivery, enhancing convenience and satisfaction while maintaining operational efficiency.

Order tagging & filtering

Tag orders (e.g., high-value, rush) and use filterable views.

The Yunefy OMS Advantage

Empower Your Team

A **happy fulfillment manager** can effortlessly navigate the performance dashboard, ensuring that all orders are managed properly and efficiently. This streamlined approach enhances team productivity and customer satisfaction.

Data-Driven Decisions

With real-time insights, managers can make **informed decisions** based on performance metrics. This capability allows for quick adjustments, optimizing order fulfillment and overall business operations.

Seamless Collaboration

The dashboard promotes **collaboration among teams**, ensuring that everyone is on the same page. This unified approach helps to build a more cohesive team that works towards common goals.

Take Control of Orders

- Streamline operations with **Yunefy's centralized dashboard**.
- Enjoy **real-time updates** for order status.
- Automate processes to save time and resources.
- Enhance flexibility with split, merge, and hold order capabilities.
